

CorrosionX

Rust Remover

Product Description

Rust remover and metal conditioner. Rust Remover is a breakthrough in the removal of unwanted rust. Eliminates rust from iron and steel without harmful fumes. Begins working immediately to transform rust into a gray/black iron phosphate, which interrupts the rusting process. When the rust is gone, the chemical transformation has occurred, and the surface is prepared for a protective coating such as paint. It is compatible with many surfaces and will not harm most glass, hoses, decals, plastic, rubber or vinyl and paints. Effective for use on most painted surfaces for removal of surface rust.

CorrosionX Rust Remover is not to be used on non ferrous metals and blueing of any kind.

Do not use on firearms, as Rust Remover will remove gun bluing.

Application Suggestion

- High potency formula, can be used indoors
- Removes rust without smoke or fumes
- Prepares metal surface for paint and increases lifespan of paint job
- Compatible with most vehicle paints, decals, wiring and hoses

Direction of use

Once rust has been removed, it is important to treat metal with some kind of protective coating so that the clean metal surface does not re-rust. For this purpose we recommend neutralizing / rinsing the cleaned metal surface with Xtreme Clean and water and then either paint, or if you prefer a clean metal look, use CorrosionX.

Safety brief / precautions

Keep well away from children. Wear safety glasses and protective gloves. Do not get in contact with food.

Do not use on guns or antique weapons as this product will remove bluing. Product should be neutralised after use with an alkaline solution, i.e. Xtreme clean.

For full safety briefing please see SDS sheet.
